Browsers Supported

- Firefox 4+
- Latest Chrome
- Latest Safari
- Internet Explorer 8+
- Opera 11

Customizing your theme

All custom css exists in the style.css file. Also included is a style.less you can choose to edit and generate the style.css file

The beauty of Alfaroa is there are only 2 images used in the theme itself so it's very easy to customize.

Customizing the header background.

Open the style.css or style.less file and location the `#header` id and change the background file path to your new image.

```
#header {  
    border-top: 2px solid #414C60;  
    background: #3e495d url(../img/header-background.jpg) center 0 repeat-x;  
    text-align: center;  
}
```

Customizing the header screenshot.

In your theme package please find the psd folder. Located inside you will find a screenshot.psd file which contains the layered artwork you can use to customize your homepage screenshot.

Customizing the logo.

The logo is a simply HTML text using a Google web font. To change the font find the `.logo` class and change the font-family to your new font.

```
#header .logo {  
    margin: 45px 0;  
    font-family: 'Condiment', cursive;  
    font-size: 44px;  
}
```

Thank You

Thank you for purchasing the Alfaroa theme.
